

HERCULES™ ROBOTIC MIG WELDING SYSTEM

Enhances welding
productivity without
the need for additional
weld cells

Hercules is revolutionizing the welding industry.

If you're in the fabrication or manufacturing industry, you understand that precision is key. With the advancements in robotic welding and automation systems, achieving this precision has become easier than ever.

That's why nexAir, a leading supplier of industrial gases and welding supplies, has partnered with one of the giants in the welding supply field. The Hercules™ High-Deposition Automated Welding System is a game-changer. It provides the highest quality welding that is both efficient and cost-effective. And it can take your business to the next level.

Boldly Raising the Bar in Welding Productivity and Profitability

In today's fast-paced manufacturing landscape, every facility is challenged to make its processes faster. You need to be more efficient and more productive.

Achieve this goal by adopting robotic welding and automation systems. And if you're looking for a reliable partner to help you make this transformation, we can help. With years of experience and a proven track record of success, nexAir is the partner to help take your welding productivity and profitability to the next level.

What's even better? Combining nexAir's expertise with the power of the Hercules™ High-Deposition Automated Welding System. It's a winning formula for success. A partnership that will make a real impact on your facility's bottom line.

Maximize Productivity and Increase Operational Output with Zero Need for Capital Infusion

For medium to large manufacturing operations like yours, maximizing productivity and increasing operational output are key factors that keep you competitive. However, achieving these goals often requires major capital investments in automation systems.

That's where the Hercules™ High-Deposition Automated Welding System comes in. Specifically designed for robotic welding applications, the Hercules™ system provides greater throughput. You won't have to add extra robotic welding cells at all. Thus, you are saving the expense for costly additions like positioners, barriers, additional torches, power supplies, and welding fixtures.

With the added benefit of being compatible with nexAir welding systems, the Hercules™ system is an ideal solution if you're seeking to increase your operational efficiency without breaking the bank.

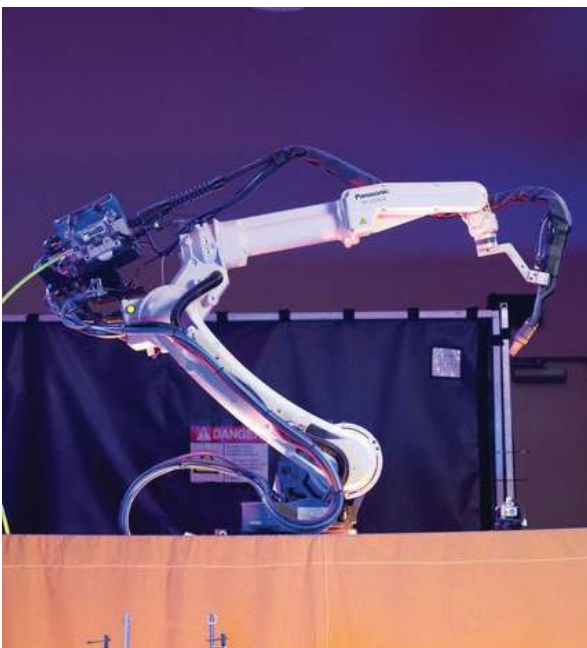

How Do You Know Robotic Welding and Hercules™ are Right for You?

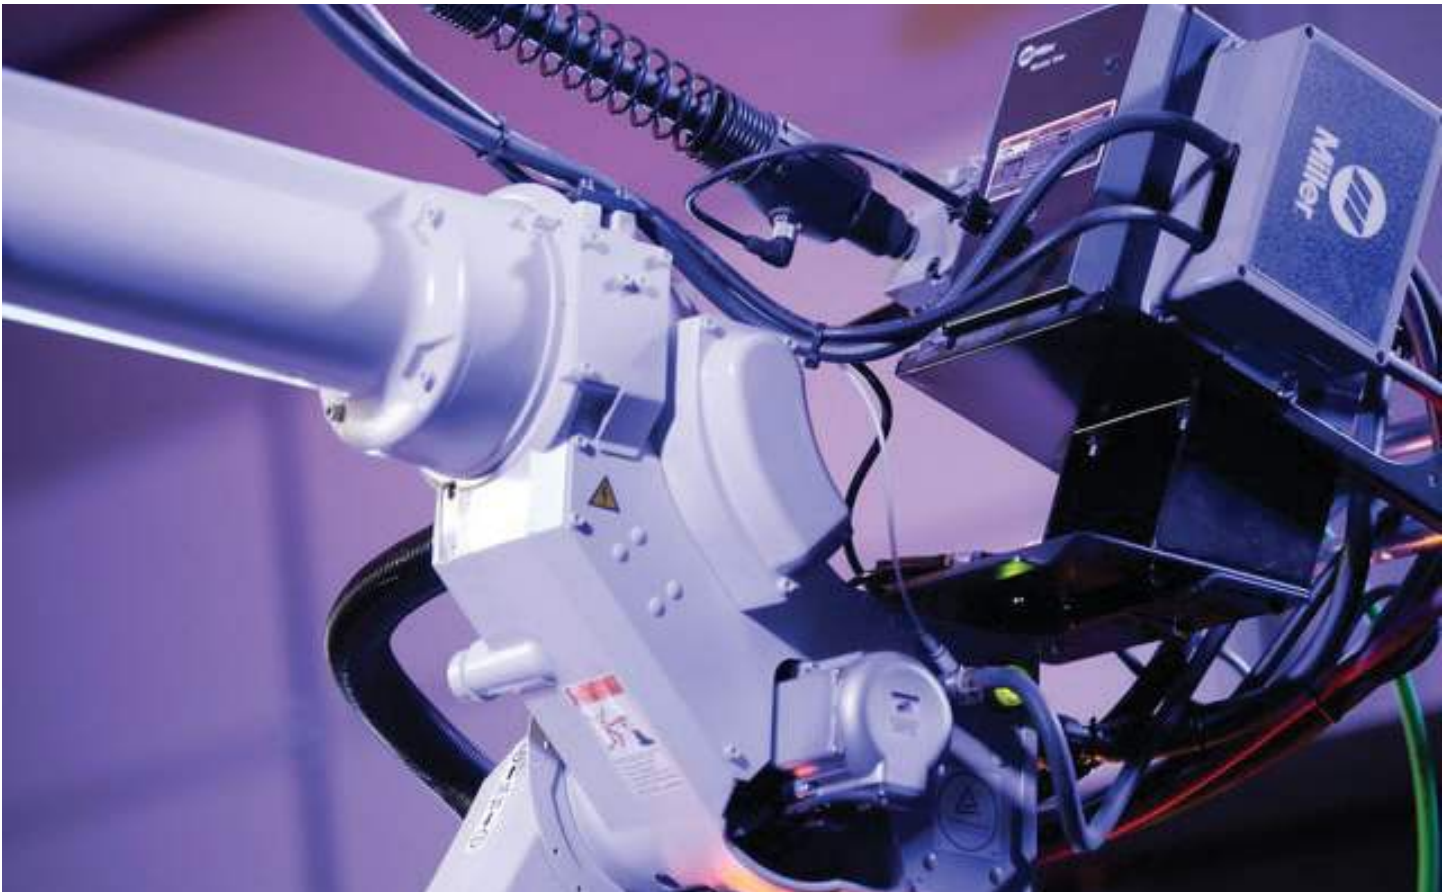

Are you eager to run your fabrication floor at full capacity? Would you like to streamline your operations, but want to avoid the hassle of major capital investments or rearranging your entire production?

If your answer is yes and yes, then the Hercules™ High-Deposition Automated Welding System is the perfect addition to your current setup!

- Delivers deposition rate gains of up to 30% or more without compromising weld quality
- Ideal for medium to large manufacturing operations with robotic welding systems already in place.
- Ideal for fabrication facilities considering the added boost of robotic systems on their lines.
- Highly recommended for fabrication and assemblies that need to do long welds in flat and horizontal positions
- Provides greater throughput minus the expense of adding more automation welding cells.
- Maximizes your operational productivity while using your existing systems and floor space.

If you're looking to boost your welding speed and productivity, look no further than nexAir's robotic welding and automation systems. Partnering with Hercules™, nexAir has added even more value for its customers. Together, they provide companies like you with the confidence you need to take your operations to the next level.

Why Choose nexAir and Hercules™ When Upgrading Your Welding Automation?

When it comes to upgrading your welding automation systems, choosing the right partner and supplier is crucial. That's where nexAir and Hercules™ come in. Designed for medium to large manufacturing operations with robotic welding, the Hercules™ High-Deposition Automated Welding System is ideal for long welds in flat and horizontal welding positions. You will get greater throughput without a major capital infusion.

More importantly, you'll be able to create the future you envision for your team and your company with the utmost confidence knowing that you have partners in nexAir and Hercules™.
